ABOUT

I'm a Ruby Software Developer with a good eye for design and UI/UX. I love coding and enjoy learning about different businesses while helping products grow.

My approach combines technical depth with design sensibility. I modernize legacy platforms, design understated user journeys, and guide teams through measured delivery cycles. Whether it's a long-term engagement or focused collaboration, my goal is to make products better and help people enjoy the process.

Fluent in English, Spanish, and Portuguese.

CREATOR OF

- **jorisloop.com**
  An AI that delivers, not chats. You set a Routine — a standing instruction, a schedule, an output shape — and joris ships a purpose-built Delivery on time: a morning briefing, a house-hunt shortlist, a training session, a newsletter. No chat box, no model picker. The output is the product.
  Rails 8.1 · Ruby 4.0

- **verniz.app**
  A simple booking calendar for independent beauty professionals. It shows the free slots in your day, learns each client's visit rhythm and flags who is due to rebook, gives every client a personal booking link to share on WhatsApp, and drafts the confirmation messages for you to send. A PWA: it works straight from the phone browser and is at its best installed to the home screen.
  Rails 8.1 · Ruby 4.0

EXPERIENCE

Strategic Partner & Product/Tech Advisor · Just In Time Data
January 2026 – Present

Collaborating closely with Ricardo and the team to guide the product vision, architecture, and positioning for JustInTimeData's B2B analytics ecosystem.

Product & Platform: Redesigned the core platform (jit-evolution) and structured the website ecosystem to sharpen how the product meets retail and FMCG needs.

Technical Guidance: Partnered with the engineering team to shape resilient foundations, clean delivery cycles, and modern practices.

Product Developer · Freelance
November 2021 – Present

Working as a contractor helping different types of companies and products. My collaboration ranges from full-time to focused 15-minute daily engagements with the goal of making products grow, learn, and help people enjoy the process.

I do discovery and technical planning for AI-enabled initiatives: mapping requirements with stakeholders, defining data and API architecture, and identifying repetitive flows to automate (support, documentation, reporting). I design simple, maintainable foundations, Rails-based sites/CMS and knowledge bases, built for scale and clarity.

Product Management · Product Design · Software Development

Senior Software Engineer · ChartMogul
June 2024 – August 2026

Working with very talented people in the integrations team to build and maintain entry points for data. Focusing on delivering reliable, scalable solutions that enhance data connectivity.

PostgreSQL · Ruby

Senior Software Engineer · Cint — April 2023 – March 2024

Helped consolidate a legacy survey platform into a unified stack, building phased rollout plans, documenting support playbooks, and reducing incident noise for thousands of end users. The migration from legacy platform to unified architecture had significant impact while maintaining empathetic support for users.

Ruby on Rails · Sidekiq · MySQL · MongoDB · Kubernetes · Docker

Software Engineer · carwow — August 2022 – November 2022

Focused on TDD practices and full-time coding. Gained insights into how multiple engineering teams organize and collaborate at scale.

Ruby on Rails · RSpec · Elm · JavaScript

Senior Developer & Team Lead · Runtime Revolution — November 2017 – August 2022

Led cross-functional squads, identifying and removing blockers to maintain team velocity. Provided technical guidance, coached engineers, and kept teams aligned with client decision cycles. Focused on individual and team happiness while delivering measured results.

Ruby on Rails · React.js · PostgreSQL · Elasticsearch · Redis · Amazon Web Services (AWS) · Heroku

Web Consultant · Wrightia, SA — November 2012 – August 2017

A turning point in my professional journey. Transitioned from Microsoft ecosystem to open source world through Ruby development. Gained experience in "scrum-ish" product development and management in a startup environment.

Ruby on Rails · PostgreSQL · Elasticsearch · Redis · Sidekiq

Web Developer · Cofidis Portugal — September 2009 – June 2012

Learned about corporate business and development processes. Delivered high-quality solutions that were massively tested and thoroughly planned. Worked with OutSystems and .NET, pushing for latest web trends.

.NET · ASP.NET · C# · Microsoft SQL Server · Outsystems

TECHNICAL SKILLS

Core Stack	Frontend & Design	AI & Productivity	Previous Experience
Ruby on Rails	CSS	Claude Code — daily driver	.NET & MVC
RSpec & TDD	UI/UX Design	Opencode	OutSystems
Sidekiq	Responsive Systems	Workflow Automation	jQuery
PostgreSQL	Interface Architecture	Design-first Prototyping	C#

EDUCATION

University Degree, Design · IADE - Creative University — 2010 – 2013

MCP Certifications from Microsoft · New Horizons Computer Learning Centers — 2004 – 2005

Programming Analyst, Information Technology · INEPI — 2003 – 2004
